

BRIDGE

LINEN TRANSITION CONVEYOR

AUXILIARY

CONVEYORS

HOW IT WORKS

Bridge linen transition conveyor neatly transfers stacks of folded linen from a small or large piece folder or towel folder onto a master linen conveyor system. After receiving stacked linen, the Bridge's telescoping plate extends the stack over a master conveyor. As the plate retracts, motor driven rolls control the ribbons to allow the stack to remain stationary as it is quickly yet gently transferred into the master conveyor flow without tipping or colliding into other linen stacks.

CHICAGO

OPTIONAL FEATURE

DrawBridge

Individual hinged inlet conveyors between folder and Bridges that can be raised for easier maintenance access to the inner Bridge units as well as the back of the folder. Paired Bridge units are controlled by a single panel for easy access. Designed for Skyline SP, but can also be used with dual stackers (hinged conveyor is optional for this configuration).

KEY CHICAGO® ADVANTAGES

Multichannel Linen Traffic Control

Automatically senses items on master conveyor and regulates Bridge movements and timing of discharges. Optional control box for coordinating multiple Bridge systems is available.

Building on our industry-leading 130 years of experience, we continuously evolve and innovate to meet the changing needs of our customers—that is the Chicago Advantage!
